PROCESS AUTOMATION · HYPERAUTOMATION

Process Automation Agent

Connects the channels through which work arrives —EDI, email, messaging or a simple photo— with your ERP, and validates every document before it moves on. What doesn't add up doesn't pass: it reaches a person with the reason.

TWO TYPICAL PROCESSES

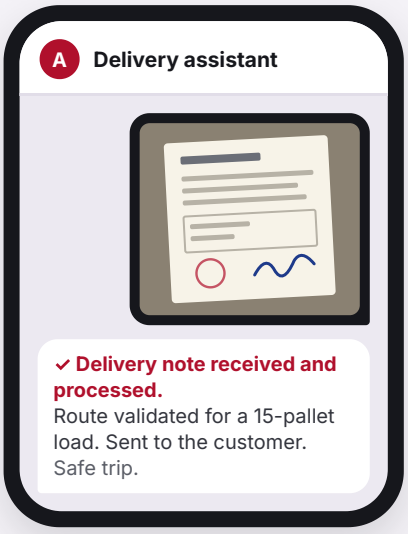

1 Order and quote confirmation

The order arrives by EDI, email or messaging. The agent checks it against the ERP —customer, references, prices, stock and terms— following a checklist you define, and proposes the confirmation. A person validates it until the process has earned full trust.

2 Delivery notes from a photo

The driver photographs the signed delivery note and sends it by messaging. The agent reads it, checks route and load, updates the ERP and passes it on to the customer's system. No paper travelling, no data to retype.

FROM THE TRUCK

WHAT YOU GAIN

- **A fraction of the time** — From quote to order with no waiting in between
- **Fewer human errors** — Oversights, misunderstandings and new hires
- **24/7 and multichannel** — Any channel, customer or segment, at any hour
- **Configurable checklist** — Your validation rules, not a tool's
- **Human validation (HITL)** — Until the system has earned your full trust
- **No learning curve** — Lightweight interfaces your team already uses

Which process do we automate first?

Over 40 years of IT experience in logistics, industry, banking and the public sector.

Thank you! *for what matters, People... for everything else, Ardora AI*
